JACQUELINE HEEREMA

Time and climate are made tangible in a sensorial form of ecological storytelling.

Cracks. Shards. Growths. The artistic practice of Jacqueline Heerema is rooted in a deep love for the sea and coastal landscapes. The way in which natural and human-induced forces intersect over time is the core fascination. Not only natural and man-made landscapes are explored, but also how perception itself can be shaped. She challenges our imagination to create a more affective, sensuous worldview. Young and old, colleagues and scientists are invited to take part in artistic fieldwork on vulnerability and impermanence as an exploration of a future climate. Unexpected experiences and fresh insights take shape in a simple, sensuous Cup with a Soul. Through an intentionally chosen, consistent visual language, the focus shifts from aesthetics to content. In these works, porcelain is not a 'dead thing'. Tough flow till - brought to the Netherlands by moving glaciers during the last Ice Age - bursts free from the porcelain. A love story of attraction and repulsion unfolds. Regenerative transformation forms the core of the Cups with Soul series and the botanical porcelain. Biomorphic, when blowing breath before the raw liquid porcelain solidifies. Experiments with porcelain in water with living seaweed, algae, and mosses challenge perceptions of living, non-living, once-living, and never-living. Processes are set in motion that allow life to continue, or even generate their own co-habitation (biotope, habitat, work). Time and climate are made tangible in a sensorial form of ecological storytelling.

Amsterdam, Netherlands A project
about sensitivity, sense of touch,
vulnerability and climate, themed
around Land in Wording. Artist
Jacqueline Heerema is fascinated by
the way in which natural and human-
induced forces meet in time, shaping
not only a landscape but also
perception itself. She wants to further
challenge our imagination and create a
more sensitive, affectionate worldview.
In a past four years, discovering a
subsurface living climate archive slowly
transformed into a love story about
beauty, versatility, resilience and
vulnerability of soil/Earth itself. During
the 6 weeks artist-in-residency at Park
Studio de Orangerie, Jacqueline
continued to make new work for the
exhibition Our Living Soil. In the
installation at Glazen Huis, she shows a
living collection of Sphagnum or
terraforming peat mosses, a series of
Cups with Soul, and a new series of
Subscapes and Plantscapes. With the
ever-changing incidence of light, glass
and mirrors, shadow and reflection an
emblematic installation with upper- and

In a series of lectures, interviews and interventions, artists and designers enter into discussions with scientists, philosophers and public. The human desire to understand abstractions leads to new inventions, critical research and a poetic contemplation of our environment. In the midst of art and design, in specially designed exhibitions the program is dedicated to makers who question current systems of thought and who allow collective truths to falter, because the future demands radically different systems. Uptime_ (Nest), Climate as Game Changer (Border Sessions). Environmental Literacy, Global Currents, Landscape Observations (Climate as Artifact). finished
2019	Bilbao, Spain Art & climate change, artist-in-residency Basque Center for Climate Change (BC3), Bilbao, Spain.		
--	Zandgast, Netherlands Zandmotor 2014-2018: artist-curator for Satellietgroep of 5 years artist-in-residency and public programs to explore the Zandmotor as cultural phenomenon. Zandmotor is a coastal pilot near The Hague that uses the principles of 'Building with Nature'. This innovative project aims to generate new knowledge in times of climate change and relative sea level rise for future coastal protection. An innovation, built on the foreshore in 2011 with 21,5 million cubic meters of sand. The Zandmotor is the only Dutch area outside the dikes that is exposed to the tides and wind, built to transform and even assimilate around 2030 in sea, beach and dunes. The result is a dynamic extension of the coast, a new controlled post-natural 'wilderness'. The Zandmotor is an publicly accessible open air scientific and artistic laboratory.	2017	Ministerie I & M Artist-curator of Destination Highway Afsluitdam, an interactive exhibition program by Satellietgroep at Afsluitdijk for the international innovation conference called Making Waves. The man-made Afsluitdijk (1932) is sourced as innovative milestone of geological time, landmark for climate change and highway for migration. Relict of relocated raw materials and species. Glaciers deposited till and humanity creates new conditions for iconic rare species: a rock shore habitat for migrating plants, animals and humans, in between two Natura 2000 habitats. finished
--	Now Wakes The Sea Artist-curator for Satellietgroep of international exchange artist-in-residency and public programs since 2012, developed in collaboration with international cultural partners. The programs function as an alternative source for collecting the intangible local knowledge derived from the artistic and scientific projects. New concepts and works are developed that we collect,	2016	Kennisnetwerk Nederland-Belgie Artistic researcher of The Sublime Coast is a critical analysis of spatial coastal quality and tourism along the Dutch and Belgian coastlines. finished

connect and contextualize with existing works for public events like traveling film festivals, exhibitions, workshops and presentations at expert conferences. By interconnecting coastal communities, arts and science we share local knowledge on global level to gain sustainable insights on coastal transitions that transcend local and national issues. Locations: New York City, Japan, UK, Malta, Lithuania, Russia, Georgia, Moldova, Turkey & more.

-- Badgast, Netherlands Scheveningen 2009-2014: artist-curator for Satellietgroep of 5 years international artist-in-residency and public programs in one-and-a-half stacked recycled shipping container, build by Refunc Recycle Architects in the middle of the temporary surfing village called F.A.S.T. Arts and science can express the spatial and social and ecological qualities - as well as the problems - of our coastal areas, and make them engagingly accessible to the public. These works can transform a destination normally marked by consumption and recreation into a platform for critical communication and serious reflection. This timely reflection on spatial transition processes may act as a strong catalyst in generating public and professional discussions and connect contemporary research and new works to historic and future works and coastal transitions. ☒

-- DCR Gueststudios, Netherlands The Hague 2013-2018: artist-curator for Satelietgroep of 6 years self directed and curated artists-in-residency program at De DCR in The Hague. De DCR is a cultural incubator that also houses 35 permanent studios for artists and designers, including the studio of Satellietgroep, Zaal 3 - laboratory for Performing Arts of Theater aan het Spui, sound studio Loos, Cloud Danslab and exhibition space Nest.

residency on and about the Zandmotor as cultural phenomenon. Overtreders W, Rob Sweere and RAAAF (Rietveld Architecture-Art-Affordance) are selected for the first designs of Zandgast. Aimed at sharing new works and insights of the coexistence of humanity and the sea with broader audiences and in collaboration with multiple partners. finished

2015 Rijksdienst Cultureel Erfgoed Artistic researcher of The Anthropogenic Coastal Atlas, Part 1. Artistic research into the hybrid relationship of humanity and man-made nature: understanding climate change through innovatory heritage, public appropriations and storytelling. With the prospect of climate change, rising sea level, dis-balance of salt and fresh water, shifting ecologies and geopolitical strategies, migrations of people and species, pressures of tourism and energy supplies we face major coastal transitions worldwide. Transitions that may lead to conflicts, estrangements, loss of heritage and loss of more informal cultural uses of public coastal space. Understanding these processes involves disclosing new visual narratives, as the vital links for unlocking knowledge and insights of the perception of history (where we come from) and the challenges we face (where we are going). finished
