EVELINA RAJCA

Evelina Rajca's practice is based in between intuitive embodied knowledge and systems that construct processes of documenting these experiences, translating them into interventions, objects, maps and scores. She uses old and new technologies as working materials in an ever-changing process. Her performative explorations in the form of collaborations, sculptures and interventions in public space stimulate the question of who inhabits that space under constant transformation.

- 2021 W139 Amsterdam, Netherlands In 2021, the participants of Architectures of Noise were working individually and collectively in art-based research processes. They involve reading sessions, walks, talks, accompanied by architectural and sculptural interventions, performances, workshops, and experiments, especially in the sense of experiri (experience), reason, and resonance in the public and private domains. During the summer session at W139, artifacts of diverse but interconnected aspects of these genealogies of experience and epistemic architectures are shared with the public. Surveying how these specialized and sometimes also ambiguous instruments (i.e., language, laws) materialities and political concepts crystallized from the past influence future progress. Architectures of Noise is curated by Evelina Rajca and made possible in collaboration with: Clara Palli Pierfrancesco Gava Arefeh Riahi and Sher Doruff Ellington Mingus Susanna Schoenberg Thomas Hawranke Lillian Rosa, Gudrun Schoppe in collaboration with Samer Makarem Evelina Rajca in correspondence with Felipe González and Konrad Bohley and guests w139.nl/en/event/architecture-of-noise/

- 2020 Jutta Cuny-Franz Award - Exhibition Kunstpalast Duesseldorf Duesseldorf, Germany The Jutta Cuny-Franz Memorial Award was founded by Ruth-Maria Franz (1910–2008) to keep the memory of her daughter and artist Jutta Cuny (1940–1983). Jutta Cuny was one of the most distinguished protagonists of European glass sculpture from the mid-1970s to her early tragic, accidental death. Shaped by sand-blasting from solid glass blocks, her sculptures opened new paths into glass art. Her cubic, polished blocks gained shape through their complex, matted interior. Jutta Cuny found transparent glass to be her favoured material, which she contrasted with others, such as bronze, or porcelain. www.kunstpalast.de/en/museum-3/collection/art-prize/cuny-award
