JONATHAN REUS

The future can only be anticipated in the form of absolute danger. It is that which breaks absolutely with constituted normality and can only be proclaimed, presented, as a sort of monstrosity

I am an American artist and composer with Dutch, Indonesian and Eastern European roots. My work uses performance and music to explore questions of how culture is represented in technological forms. Methodologically, I take on long-term research trajectories that unfold through iterations of a single work and require the establishment of new artistic vocabularies developed through intimate relationships with technical materials, tinkering, experimenting, exploring the possibilities of self-made artistic software and hardware.

METAORGANISM Performing Arts Lab University of Twenthe Twenthe, Netherlands

2024

2023

www.utwente.nl/en/designlab/events/2023/12/1267634/1 salon For this special evening, the main space of the DesignLab, University of Twenthe, was transformed into a performance art laboratory, presenting a collage of vignettes exploring the use of interactive technology, Al voice and wearable robotics in live performance. The performances presented were developed through an intensive 3-day pressure cooker at the DesignLab, where a group of invited artists and technologies have collaborated to create new work on the spot, using a combination of rapid prototyping and rapid ideation, creation, and experimentation.

In Search of Good Ancestors / Ahnen in Arbeit Deutchlandfunk Kultur Berlin / German Public Radio, Germany ahnen.in A year-long experiment in generative radio, investigating the nature of datasets and machine learning algorithms as unstable, intergenerational memory. A 24-hour broadcast on German Public Radio features the voice(s) of an artificial BroadCaster, a bespoke generative voice instrument utilizing deep learning text and speech models that begin pre-trained on widely used public research datasets. The BroadCaster mutates via trainings on smallscale datasets created collaboratively through a series of public workshops happening through the year. The Broadcast + Workshops navigates themes of long-term and intergenerational thinking - using as its seminal text American virologist Jonas Salk's 1977 lecture "Are we being good ancestors?". Here, Salk, a renowned altruist, calls for the cultures of "the West" to make intergenerational responsibility the highest moral imperative. Through the year the BroadCaster repeatedly attempts to extrapolate on this lecture, its predictions altered by the contributions of texts, stylistic annotations and voice recordings collected in the workshops. Thus, new vocal identities and poetic styles emerge in excess of the single voice, while those of the initial trainings decay over time through a process of "catastrophic forgetting" when being trained on a dataset whose diversity unfolds over time. The broadcast streams from January 2022 - February 2023 at ahnen.in, while fragments are played intermittently on German Public Radio until end of December 2022. The workshops' activities were conceived in collaboration with artist-researcher Eleni Ikoniadou, and Angeliki Diakrousi, Joana Chicau, amy pickles and Cristina Cochior of VARIA. This

The Future: failure/no failure, a dedication to Erkki Kurenniemi International Film Festival Rotterdam, Netherlands An evening concert dedicated to the work of flamboyant Finnish futurist, inventor, experimental filmmaker and electronic music pioneer Erkki Kurenniemi. Performing on the exposed circuitry of obsolete waste computers, Jonathan Reus provides a brute alternative to computer music. Reus' torrents of glitched visuals, hard digital rhythms, and body-interfacing performances make a modern dystopian counterpart to Kurenniemi's optimistic vision of the human-machine condition. iffr.com/en/blog/mind-the-gap-nights-2014 Solo

work is commissioned by CTM Festival, Deutschlandfunk Kultur and ORF Ö1 Kunstradio, with additional support from the Leverhulme Trust.

Anatomies of Intelligence V2 Rotterdam Rotterdam, Netherlands anatomiesofintelligence.github.io/
Anatomies of Intelligence is an artistic research initiative seeking to make connections between the formats and collections of anatomical knowledge and investigations into the "anatomy" of computational learning and prediction processes, datasets and machine learning models.

Sensory Cartographies Platform for Thought In Motion The Hague, Netherlands sensorycartographies.info/ Sensory Cartographies is a collaboration between composer Jonathan Reus and artistresearcher Sissel Marie Tonn. The Sensory Cartographer seeks to explore extreme and information-rich environments; developing an understanding of these spaces through mediated forms of attention and mindfulness towards physiological, psychological and cognitive movements. We create wearable technologies and neurosensory attunement instruments that attempt to renegotiate techniques of cartography, collection, categorization and navigation originating the in colonial "golden age" of botany, drawing a line between these impulses to categorise nature to modern measurement and monitoring technologies.

Celestial Fruit on Earthly Ground Forecast Platform, Berlin Online, Ghana cfoeg.land A hybrid digital/performance project exploring the cultural and geographical pathways of musical knowledge. Beginning with the American banjo family, and the oldest existing banjo of the Americas, the Surinamese "creole bania." This becomes a starting point for seeking out a living network of musicians, instrument-makers, and tradition-bearers. The project has two parts, 1) live performance collaborations on-site, and 2) an interactive software experience, gathering traces of these exchanges as music, text, and objects in the physical world digitized remotely. The experience will express a layered and flexible concept of heritage that validates the role of online encounters, while also recognizing their fragmentation and acknowledging the need for interpersonal exchange in building respect for the cultural histories we are entangled in, both by circumstance and by choice.

The Reading Room Stroom Den Haag The Hague, Netherlands platformtm.tumblr.com/ The Reading Room is an event series dedicated to creating a community-oriented, public platform for

2018

encounters with contemporary ideas on art and society. At its core, the Reading Room series revolves around the reading of texts provided by invited guests - cultural theorists, philosophers and curators - who join our diverse community in an open discussion while providing insight, context and perspective on the topics at hand. The series stems from a belief that keeping a close connection to historical and emerging theories on art and culture is invaluable to artists. Especially in the 21st century, where theory, practice and social engagement in the arts seem to merge ever more seamlessly. The Reading Room's curatorial and organizational team is Sissel Marie Tonn, Jonathan Reus and Flora Reznik. The program is produced by the Instrument Inventors Initiative and, since 2016, is hosted by Stroom Den Haag.

COMMISSIONS

2022

In Search of Good Ancestors / Ahnen in Arbeit CTM Festival, Berlin Online, Germany A year-long experiment in generative radio commissioned by CTM Festival and Deutschlandfunk Kultur. An artificial BroadCaster, a bespoke voice synthesis system utilizing current deep learning techniques in voice synthesis and style transfer shifts through speech and song, words and soundscapes, reading through text as if tracing slowly over the letters, probing them and unsettling them. The *BroadCaster* performs words produced by a predictive process. Beginning with Jonas Salk's essay "Are we being Good Ancestors?", it tries to predict what words should come next based on its previous memories. Ideas of long-term thinking, wrapped up in human activities of prediction, risk analysis, and memory happen at many levels of human society and individual consciousness. How do we make decisions today, navigating the many layers of uncertainty about the long-term future we are a small part of? www.ctmfestival.de/festival-2022/programme/features/radio-lab/insearch-of-good-ancestors-ahnen-in-arbeit finished
