CHARLOTTE ROSCHKA

I am an interdisciplinary artist working in the field of artificial life. With a background in bioinformatics and bio-engineering, my practice explores biological processes through simulations. My work introduces an experiential layer to theoretical concepts, contributing to an embodied and holistic understanding by creating new ways to engage with and experience the processes of life. Through my artworks, I aim to allow humans to reconnect with ourselves and the world we live in and to rehearse new roles in a changing world that envision sustainable ways of being with other life forms, planetary environments and new technologies.
